

VISUAL INTERFACE FOR PASSWORD ENTRY AND RETRIEVAL

Thank you for choosing VIPER.

This is the Readme File for VIPER 4

VIPER is an application written in Python and Tkinter. It is a Graphic User Interface(GUI) application. The first three versions of VIPER were written in Visual C++ and ran on the DOS shell and did not include GUI functionality.

The first thing that you will see as soon as you run the executable is a universal menu. This menu will take you wherever you want to go. It has many options. Almost all of them are self explanatory and I am sure that you will be able to understand how they work.

My mail id is: kannan.siddharth12@gmail.com. In case you have any kind of doubts then do mail me. I will respond to them as soon as possible.

I hope you like this release.
